R. E. ANDERSON
DEPUTY MINISTER

FOREWORD

This publication provides co-ordinated statistics designed to aid in the evaluation of the Nova Scotia apprenticeship program. The importance of a successful training program in providing a skilled labour force to meet the ever changing requirements of advancing technology is of prime concern to modern day governments. Recognition of the role of statistical analysis in formulating government policy stimulated the initiation of this project.

The data is presented in an objective form and does not propose solutions to any problem which may exist in a particular trade or area but rather allows the user to draw his own conclusions. The material chosen for this publication has been selected with a view to presenting the reader with some basic statistics for assessing present apprenticeship training programs.

This report has been prepared by Mr. J. B. Robertson, Economics and Research Division, under the supervision of Mr. Ken Horne.

INTRODUCTION

Apprenticeship is one of the oldest forms of organized manpower training. It has survived for over four thousand years as an effective method of training people entering highly skilled trades and is a means of passing on from generation to generation accumulated trade skills and knowledge.

The first Apprenticeship Act in Nova Scotia was passed in the nineteenth century. This was during the period of free control of apprenticeship and the legislation was intended primarily as a welfare measure rather than to direct and organize any manpower training scheme.

The Apprenticeship Act of 1937 did treat apprenticeship as a method of training in skilled trades. That Act provided for a division of government to be organized for the purpose of establishing and promoting a permanent system of apprenticeship. In 1952, the Act was replaced by another bearing the same title. It provided for area designation of trades, clarified the authority for plant systems of apprenticeship training, and permitted associations and organizations to enter into apprenticeship agreements.

By amendment in 1958, the Apprenticeship Act - 1952, and the Tradesmen's Qualifications Act - 1946, were consolidated into the Apprenticeship and Tradesmen's Qualifications Act. This Act, while not changing the intent of either of the two pervious Acts, provided for better regulation of apprenticeship and tradesmen's qualifications in designated trades. In 1966, a new Apprenticeship and Tradesmen's Qualifications Act was passed replacing all of the Revised Statutes of 1954.

Apprenticeship in Nova Scotia is administered by the Department of Labour. The Apprenticeship and Tradesmen's Qualifications Division is responsible for the development of skilled manpower through an organized system of training and the establishment of adequate trade standards.

TECHNICAL NOTES

IN-PLANT TRAINING

Provision is made under the Apprenticeship Act for the designation of plants across the Province for In-Plant Training. When training and instruction are available in areas where the plants are situated apprentices from these plants are given periods of related instruction similar to that given under the Block Release system and attend classes without loss of pay. In areas where training facilities are not available or where apprentices are unable to leave their place of employment during the day, correspondence courses are provided.

BLOCK RELEASE

Once an apprentice has chosen his trade, he must locate an employer who is willing to provide the practical experience and supervision on the job to help him learn the trade. Having found such an employer, he should apply to the Apprenticeship and Tradesmen's Qualifications Division for registration as an apprentice. If after a probationary period of ninety days he is found acceptable to the trade, he will be registered as an apprentice.

Block Release apprentices attend special apprenticeship classes in related trade theory for a minimum period of five weeks each year. The classroom training includes trade theory, blueprint reading and mathematics required to become a competent tradesmen.

PRE-EMPLOYMENT TRAINING

At the age of 17, the prospective trainee may make application for the Pre-Employment Training classes. Students are selected on the basis of a personal interview and the results of a battery of aptitude tests.

Selected applicants spend a minimum of twenty weeks at the school and take training in both trade theory and practical skills. Upon successful completion of the course, the apprentice is granted six months' practical credit on his term of apprenticeship. He also receives credit for the first two years of theory classes. After successfully completing the Pre-Employment course, he is required to attend the third year and fourth year classes (five weeks each year) before he completes his apprenticeship. This type of training provides instruction in the basic manual operations required of an apprentice when he starts employment.

REGIONAL VOCATIONAL SCHOOL GRADUATE

If the candidate is a regional vocational school graduate, he will be granted a credit of one year towards the completion of his apprenticeship program. He may also be granted the privilege of writing the second year apprenticeship examination. On passing this exam, the successful candidate will not be required to attend the second year class.

GEOGRAPHIC DIVISIONS

For purposes of this report, there will be two geographic divisions: Mainland Nova Scotia, and Cape Breton which includes all of Cape Breton Island.
